

TJ's BPPC Tyres for Safety

(Burst Preventive Puncture Curative)

The Committee on Road Safety formed by the Supreme Court of India has found that every year 1.5 lakh lives are lost, 5.8 lakh people are seriously injured and 3% of India's GDP is impacted because of accidents. 10% of these are caused by tyre failures.

Our patented BPPC Tyres (Burst Preventive Puncture Curative tyres) prevents bursts in tyres caused due to localized overheating, cures the puncture without human intervention and maintains dynamic self-balancing with extra fuel mileage and higher life of the tyre.

This is the next generation tyre after tubeless tyres and is a multi-chamber tyre with sealant, coolant and balancer inside it. The sealant takes care of the puncture. The coolant cools the tyre by distributing the localized heat throughout the tyre uniformly hence prevents burst. And the balancer balances the tyre dynamically and improves driver's safety and comfort.
